A New Paradigm for Mission-Critical Business Software Development and Delivery
In today’s challenging business environment, a company’s success is often defined by two criteria: operational efficiency and customer satisfaction. For larger, more transaction-intensive companies, this requires continual upgrades in mission-critical applications. These must be deployed on-time and on budget, contain the foundation architecture to easily grow and adapt to business and market changes, and most importantly, deliver tangible and measurable results through every stage of the project, not just at project completion.

Larger companies often deliver new technology solutions through a brute force process. Even when legacy systems are replaced with new packaged applications that provide 80 percent of the required functionality, achieving the remaining 20 percent can double or triple the final delivery cost. While this may be to the advantage of software development and system integration contractors who bill by multiplying the number of bodies on an engagement by the length of engagement, it poses significant risks for their customers who live in a world of tight margins, stiff competition, and budget constraints.

Osprey operates on a different business model. We depend on repeat business and stellar references – not extended overstuffed engagements. We solve problems with quality rather than quantity. Our clients represent the biggest names in financial services, health care, insurance, and defense. We continually deliver the results our clients demand – on time and on budget. And when a new project gets approved, Osprey is always on top of the client’s new short list. That’s why our client base is 100% referenceable.

At Osprey, we don’t believe in the “Big Bang” or “Waterfall” approach to mission-critical application development. We divide each project into multiple milestones. Each milestone is designed to deliver tangible, measurable value. If we discover a problem or incompatible process, it will be isolated early and corrected as part of the specific development phase, rather than trying desperately to reengineer an entire system by force after a year or more of wasted development efforts. This provides major risk mitigation for our clients, and in many cases, the client can start using new applications before the entire project is completed.
Osprey is more than a technology and professional services consulting organization. It is a premier team of experts in the design and development of complex business applications. Osprey has assembled one of the most highly regarded teams of architects, engineers, and consultants in the business. Our world-class development and delivery team is led by an equally exceptional management team whose members each boast over 20 years of experience in the design and delivery of large scale and advanced business systems, and in leading the growth and viability of business software companies.

Osprey’s unique “Osprey Agile Development Methodology” (OADM™) combines a powerful blend of proven architecture, technology, and business expertise with an effective partnership process. This methodology ensures that our client’s mission critical business objectives are always met with substantive results.

Osprey’s fully-integrated, forward-thinking enterprise solutions enable our clients to achieve leadership in the application of IT technology for business innovation.

Methodology
- Continuous delivery of useful software
- Working software is the principal measure of progress
- Close cooperation between client business teams and Osprey developers
- Continuous attention to technical excellence and design
- Regular adaptation to changing circumstances (Even late changes in requirements are welcomed)

Osprey employs a unique mix of innovative foundation technologies, proven Internet delivery, and agile processes to deliver enterprise application and custom software solutions to companies operating worldwide. Our proven approach keeps clients’ engaged throughout the development cycle, ensuring no gaps between requirements and the final deliverable. Our leadership capabilities, superb talent, and proven methodologies have been put to the test time and time again with consistent, world-class results.
Osprey Foundation Technologies - The Foundation for Your Success

Base Technologies Jump Start Projects and Reduce Risk
- Foundation business objects
- Reusable tools and components
- Flexible design techniques

Proven Internet Delivery
- Microsoft ASP.NET / SQL Server / Oracle
- Object oriented design and programming
- Web services and Software as a Service (SaaS)

Agile Processes
- Iterative: faster time to market and reduced risk
- Unified Modeling Language (UML)
- Track record of 100% success
